

Trading Basics

Free Guide for Beginners

TradePro Academy

Chapter 1: What is Trading?

Trading is buying and selling financial assets to profit from price movements. The most common markets are Forex (currencies), Stocks, and Crypto.

Key principle: You don't need to predict the future. You need a system with an edge and strict risk management.

Chapter 2: Japanese Candlesticks

Each candle shows Open, High, Low, Close for a time period.

Hammer: Small body on top, long lower wick. Appears at support = bullish signal.

Doji: Open = Close. Shows indecision, often before big moves.

Rule: Never trade a candle alone. Wait for it at a key level.

Chapter 3: Support & Resistance

Support: Price level where buyers step in.

Resistance: Price level where sellers step in.

When support breaks, it becomes resistance (and vice versa). Trade WITH the levels, not against them.

Chapter 4: Risk Management

The #1 rule: Risk only 1-2% per trade.

Formula: $\text{Position Size} = \text{Risk Amount} / \text{Stop Distance}$

Always use a stop loss. No exceptions.

A trader who risks 1% can survive 20 losses in a row. A trader who risks 10% is dead after 7.

Chapter 5: Your Next Step

You now know the basics. But knowledge without practice is useless.

In TradePro Academy's full course you get:

- 6 video lessons (Hammer/Doji, Timeframes, S/R, BoS/ChoCh, Order Blocks)
- Interactive quizzes
- Risk calculator + checklists
- Private WhatsApp community
- Certificate on completion
